SIMILARITY: Belongs to the insulin family.
                                                                                                                                                                                                                                                                                                                                                                                     sci. Biotechnol. Biochem. 59:759-761(1995). FUNCTION: The insulin-like growth factors, is are structurally and functionally related to much higher growth-promoting activity. SUBCELULIAR LOCATION: Secreted.
TISSUE SPECIFICITY: Expressed in all tissues lung, liver, spleen, uterus, ovary, testis, h
